DETAILED ACTION

Priority

1. Applicant's claim for the benefit of a prior-filed application under 35 U.S.C. 119(e) or under 35 U.S.C. 120, 121, or 365(c) is acknowledged.

Claim Rejections - 35 USC § 112

- 2. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claims 1-7, and 12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claims 1, 2, and 7, the phrase "adapted to" renders the claim indefinite because it is unclear whether the limitation(s) following the phrase are part of the claimed invention. The claims fail to positively recite the necessary steps and limitations as to how the ONU is adapted to transmit data over a return data channel of a passive optical network regarding claim 1, how the tone modulator is adapted to modulate the ONU identifier on to the optical carrier regarding claim 2, how the latching circuit is being further adapted to toggle the switch to switch the tone to the secondary modulation sub-system at respective boundaries of the time slot. See MPEP § 2106, § 2111.04 [R-3]. Also see *Minton v. Nat 'l Ass 'n of Securities Dealers, Inc.*, 336 F.3d 1373, 1381, 67 USPQ2d 1614, 1620 (Fed. Cir. 2003).

Application/Control Number: 10/600,713

Art Unit: 2613

Claim Rejections - 35 USC § 102

Page 3

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 5. Claims 1-5 are rejected under 35 U.S.C. 102(a)&(e) as being anticipated by **Seto et al.** (US006504636B1).

Regarding claim 1, Seto teaches a transmitter for an optical network unit (ONU) (10b, fig 15) adapted to transmit data over a return data channel (30, fig 15) of a passive optical network, the transmitter comprising: a laser driver (84, fig 15) for driving a laser of the transmitter to generate an optical carrier (col 21, ln 37-47); a modulation sub-system (12-1...12-p, fig 15) for modulating data onto the optical carrier generated by the laser (col 21, ln 32-42); and a secondary modulation sub-system (16, fig 15) for impressing an ONU identifier onto the optical carrier (30, fig 15), the ONU identifier serving to identify the ONU to a network monitor that monitors the return data channel (col 21, ln 19-26).

As to claim 2, **Seto** wherein the secondary modulation sub-system comprises: a tone source (pilot carrier gen 14-1,14-2, fig 15) for supplying a tone that serves as the ONU identifier to a tone modulator (16, fig 15) adapted to modulate the ONU identifier onto the optical carrier (col 21, ln 39-42).

Art Unit: 2613

As to claims 3 and 4, **Seto** further teaches wherein the tone has a frequency that is sufficiently separated from a data modulation frequency of the primary modulation subsystem (col 22, ln 37-45). Absent any teaching of criticality, it would have been an engineering design choice to choose a frequency that is well below or above the data modulation frequency so as to acquire a sufficient frequency separation. Furthermore, where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation. In re Swain et al., 33 CCPA (Patents) 1250, 156 F.2d 239, 70 USPQ 412; Minnesota Mining and Mfg. Co. v. Coe, 69 App. D.C. 217, 99 F.2d 986, 38 USPQ 213; Allen et al. v. Coe, 77 App. D.C. 324, 135 F.2d 11, 57 USPQ 136.

As to claim 5, **Seto** further teaches wherein the secondary modulation sub-system comprises: an ONU identifier source (14-1, 14-2, fig 15) for supplying the ONU identifier to the modulation sub-system (16, fig 15) to permit the ONU identifier to be modulated onto the optical carrier by the secondary modulation sub-system (col 21, ln 39-42).

Allowable Subject Matter

6. Claims 6 and 12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Danny Wai Lun Leung whose telephone number is (571) 272-5504. The examiner can normally be reached on 9:30am-9:00pm Mon-Thur.

Application/Control Number: 10/600,713

Art Unit: 2613
